

# PROXMOX, sa vie, son œuvre

William Guyot-Lénat

Journées proxmox juin 2022

- Proxmox quelques points clés
- Version 6
- De 6 à 7
- Version 7
- Proxmox backup server

# Proxmox

- Plateforme de virtualization open-source basée sur Debian
  - KVM (Kernel-based Virtual Machine, isolation des machines)
- Haute-Disponibilité
- Migration à chaud
- Firewalling

# Proxmox - réseau

- VLAN, bonding, LACP et plus si affinité
- OpenvSwitch

# Proxmox - réseau

Focus sur un mode de bonding particulier :

- **Adaptive load balancing (balance-alb)**
- « Ne requiert pas de paramètre particulier du côté swicht. Le trafic est distribué en fonction de la charge courante. »

# Proxmox – encore plus

- Inventaire synchronisé et non centralisé
- API RESTful => la voie est ouverte au IaaS
- Sauvegardes basiques et encore plus avec Proxmox Backup Server

# Proxmox – hyperconvergé

- installation d'un cluster Ceph avec sa GUI sur les hyperviseurs

⇒ On tire partie des disques locaux

⇒ On a une interface visuelle simple pour gérer Ceph déjà configuré pour fonctionner avec le cluster

A quoi s'attendre  
avec les dernières  
versions de  
proxmox ?

# Proxmox 6

# Proxmox versions 6

- Debian Buster 10
- QEMU 4.0
- Corosync 3.0.2
- Ceph 14.2 (Nautilus) et son dashboard
- QEMU live améliorées

# Proxmox versions 6

- En pratique qu'est-ce qui nous intéresse ?
    - Application des modifications réseaux sans redémarrer l'hyperviseur grâce à **ifupdown2**
- “Pending changes (Either reboot or use 'Apply Configuration' (needs ifupdown2) to activate) ”

```
root@pve11:~# apt install ifupdown2
Reading package lists... Done
Building dependency tree
Reading state information... Done
Suggested packages:
  ethtool python3-gvgen python3-mako
The following packages will be REMOVED:
  ifenslave ifupdown
The following NEW packages will be installed:
  ifupdown2
0 upgraded, 1 newly installed, 2 to remove and 143 not upgraded.
```

# Proxmox versions 6

- En pratique qu'est-ce qui nous intéresse ?
  - Ceph
    - Gestion automatique des Placement Group de Ceph
    - Réserver par hyperviseur de l'ordre de 2 Go de RAM par disque physique de l'hyperviseur versé dans Ceph

# Migration vers proxmox ?

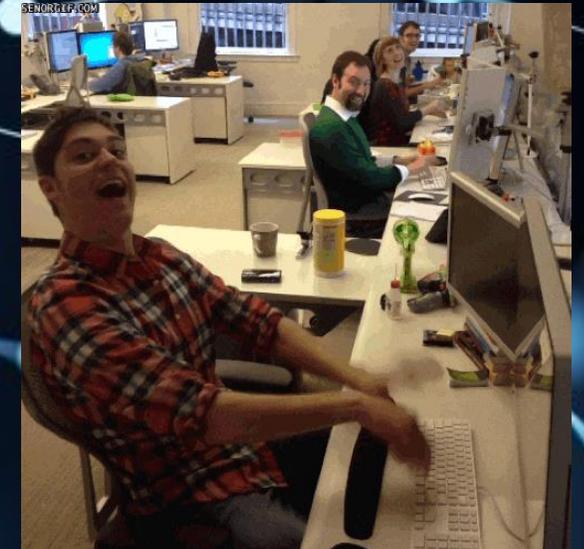

# Chemin d'upgrade vers 7

- Vous avez un second cluster prêt à être installé en version 7 et vous avez de quoi faire passer vos VM vers le nouveau cluster ?

⇒ go install version 7

- Il vous faut faire un upgrade de 6 en 7

⇒ [https://pve.proxmox.com/wiki/Upgrade\\_from\\_6.x\\_to\\_7.0](https://pve.proxmox.com/wiki/Upgrade_from_6.x_to_7.0)

# Chemin d'upgrade vers 7

- Appliquer l'outil pve6to7

```
TOTAL:      31
PASSED:     25
SKIPPED:    2
WARNINGS:   3
FAILURES:   1
```

```
ATTENTION: Please check the output for detailed information!
Try to solve the problems one at a time and then run this checklist tool again.
```

- On s'aperçoit que :

```
WARN: 'noout' flag not set - recommended to prevent rebalancing during cluster-wide upgrades.
INFO: checking Ceph config..
FAIL: local Ceph version too low, at least Octopus required..
```

# Chemin d'upgrade vers 7

- Le warning 'noout' se résoud facilement :

The screenshot shows the Proxmox VE 6.4-14 interface. The top navigation bar includes the Proxmox logo, version information, a search bar, and buttons for Documentation, Create VM, Create CT, and a user profile for root@pam. The main content area is titled 'Node 'pve1-test'' and features a sidebar with navigation options like Search, Summary, Notes, Shell, System, Network, Certificates, DNS, and Hosts. The central panel displays a table of OSDs (Operating System Disks) for the selected node and its sub-nodes. The table has columns for Name, Class, OSD Type, Status, and Version. All OSDs are shown as 'up' with a green indicator, indicating a successful upgrade to version 14.2.22.

Name	Class	OSD Type	Status	Version
default				
pve3-test				14.2.22
osd.5	hdd	bluestore	up  / in	14.2.22
osd.4	hdd	bluestore	up  / in	14.2.22
pve2-test				14.2.22
osd.3	hdd	bluestore	up  / in	14.2.22
osd.2	hdd	bluestore	up  / in	14.2.22
pve1-test				14.2.22
osd.1	hdd	bluestore	up  / in	14.2.22

# On met à jour tous les nœuds

The screenshot displays the Proxmox VE interface for updating packages. The left sidebar shows a tree view of the datacenter with nodes pve1-test, pve2-test, and pve3-test. The main panel shows the 'Updates' section with a table of packages. The 'ceph' package is highlighted with a red circle.

Package ↑	Version		Description
	current	new	
Origin: Debian (19 Items)			
dpkg	1.19.7	1.19.8	Debian package management system
gzip	1.9-3	1.9-3+deb1...	GNU compression utilities
libcups2	2.2.10-6+d...	2.2.10-6+d...	Common UNIX Printing System(tm) - Core library
libldap-2.4-2	2.4.47+dfs...	2.4.47+dfs...	OpenLDAP libraries
libldap-common	2.4.47+dfs...	2.4.47+dfs...	OpenLDAP common files for libraries
liblzma5	5.2.4-1	5.2.4-1+de...	XZ-format compression library
libssl1.1	1.1.1n-0+d...	1.1.1n-0+d...	Secure Sockets Layer toolkit - shared libraries
libxml2	2.9.4+dfsg...	2.9.4+dfsg...	GNOME XML library
openssl	1.1.1n-0+d...	1.1.1n-0+d...	Secure Sockets Layer toolkit - cryptographic utility
python-waitress	1.2.0~b2-2	1.2.0~b2-2...	production-quality pure-Python WSGI server
python3-bcrypt		3.1.6-1	password hashing library for Python 3
python3-cherrypy3		8.9.1-2	Python web development framework - Python 3 module
python3-distutils		3.7.3-1	distutils package for Python 3.x
python3-openssl		19.0.0-1	Python 3 wrapper around the OpenSSL library
python3-pecan		1.3.2-2	WSGI object-dispatching web framework - Python 3.x
python3-werkzeug		0.14.1+dfs...	collection of utilities for WSGI applications (Python 3.x)
python3-yaml		3.13-2	YAML parser and emitter for Python3
rsyslog	8.1901.0-1...	8.1901.0-1...	reliable system and kernel logging daemon
xz-utils	5.2.4-1	5.2.4-1+de...	XZ-format compression utilities
Origin: Proxmox (27 Items)			
ceph	14.2.22-pve1	15.2.15-pve...	distributed storage and file system

OSD

# Si l'accès à Octopus vous résiste

- [https://pve.proxmox.com/wiki/Ceph\\_Nautilus\\_to\\_Octopus](https://pve.proxmox.com/wiki/Ceph_Nautilus_to_Octopus)

# Correction de l'erreur Ceph

- Erreur Ceph de notre exemple est lié à un mauvais paramétrage de la taille attendue du pool2. La taille était surestimé d'un facteur  $> 8$
- Un peu de documentation Ceph : <https://docs.ceph.com/en/latest/rados/operations/placement-groups/>
- Et voici dans mon cas particulier la ligne de commande magique  
⇒ « `root@pve1-test:~# ceph osd pool set pool2 target_size_bytes 1T` »
- Il aura fallu 5-10 mn pour trouver la commande qui va bien. C'est assez représentatif de la correction des soucis Ceph.

# Et puis enfin

```
TOTAL:      30
PASSED:     28
SKIPPED:    2
WARNINGS:   0
FAILURES:   0
root@pve1-test:~# pve6to7 --full
```

# On continue l'upgrade 6 vers 7

- On s'assure qu'on est bien au max de la version de l'OS
  - apt update
  - apt dist-upgrade
- Puis mise à jour des dépôts :

```
sed -i 's/buster/updates/bullseye-security/g;s/buster/bullseye/g' /etc/apt/sources.list
```

- Ajout des dépôts Proxmox V7 :

```
echo "deb https://enterprise.proxmox.com/debian/pve bullseye pve-enterprise" >  
/etc/apt/sources.list.d/pve-enterprise.list
```

# On continue l'upgrade 6 vers 7

- On modifie le dépôt no-subscription :
  - `sed -i -e 's/buster/bullseye/g' /etc/apt/sources.list.d/pve-install-repo.list`
- Ou pour moi :
  - `sed -i -e 's/buster/bullseye/g' /etc/apt/sources.list.d/pve-no-subscription.list`
- Pour Ceph :
  - `echo "deb http://download.proxmox.com/debian/ceph-octopus bullseye main" > /etc/apt/sources.list.d/ceph.list`
- Résumer avant « apt update »
  - `sed -i 's/buster\updates/bullseye-security/g;s/buster/bullseye/g' /etc/apt/sources.list`
  - `echo "deb https://enterprise.proxmox.com/debian/pve bullseye pve-enterprise" > /etc/apt/sources.list.d/pve-enterprise.list`
  - `sed -i -e 's/buster/bullseye/g' /etc/apt/sources.list.d/pve-no-subscription.list`
  - `echo "deb http://download.proxmox.com/debian/ceph-octopus bullseye main" > /etc/apt/sources.list.d/ceph.list`

# Tout est bon

The screenshot shows the Proxmox VE 7.2-4 interface. The top navigation bar includes 'Documentation', 'Create VM', 'Create CT', and the user 'root@pam'. The left sidebar shows a tree view of the server environment, with 'pve1-test' selected. The main content area is titled 'Node 'pve1-test'' and contains several sections:

- Health:** Shows a yellow warning icon and 'HEALTH\_WARN'. Below it, 'Ceph Version: 15.2.16'. A table lists a warning: 'noout flag(s) set' with a severity of '!'.
- Status:** Contains 'OSDs' and 'PGs' sections. The OSDs table shows 6 'Up' and 0 'Down' OSDs. The PGs section shows 128 'active+clean' and 1 'active+clean+scrubbing+deep' PG.
- Services:** Shows 'Monitors', 'Managers', and 'Meta Data Servers' for nodes pve1-test, pve2-test, and pve3-test, all with green checkmarks.

# Proxmox 7

# Proxmox versions 7

- Debian 11 "Bullseye"
- QEMU 6.0 et OpenZFS 2.0
- Repo gérables via la GUI
- Téléchargement d'ISO images via URL
- Single Sign-On (SSO) with OpenID Connect
- Markdown dans les notes
- Ceph 16.2 Pacific
- and many more...

# Proxmox versions ?

- En pratique qu'est-ce qui nous intéresse ?
  - Gestion des repositories

The screenshot shows the Proxmox VE web interface for node 'pve1-test'. The left sidebar contains navigation options: Home, Options, Time, Syslog, Updates, Repositories (selected), Firewall, Disks, LVM, LVM-Thin, Directory, ZFS, Ceph, Configuration, Monitor, OSD, CephFS, Pools, Log, Replication, Task History, and Subscription. The main content area is titled 'Status' and displays a yellow warning icon with the text 'Warning'. A message box contains the following text: 'You get updates for Proxmox VE' (with a green checkmark) and 'The no-subscription repository is not recommended for production use!' (with a yellow warning icon). Below this, the 'APT Repositories' section is visible, featuring 'Reload', 'Add', and 'Enable' buttons. A table lists the configured repositories:

Enabled	Types	URLs	Suites	Components	Opt	Origin	Com...
File: /etc/apt/sources.list (3 repositories)							
<input checked="" type="checkbox"/>	deb	http://ftp.fr.debian.org/debian	bullseye	main contrib		Debian	
<input checked="" type="checkbox"/>	deb	http://ftp.fr.debian.org/debian	bullseye-updates	main contrib		Debian	
<input checked="" type="checkbox"/>	deb	http://security.debian.org	bullseye-security	main contrib		Debian	
File: /etc/apt/sources.list.d/ceph.list (1 repository)							
<input checked="" type="checkbox"/>	deb	http://download.proxmox.com/debian/ceph-octopus	bullseye	main		Proxmox	
File: /etc/apt/sources.list.d/pve-enterprise.list (1 repository)							
<input type="checkbox"/>	deb	https://enterprise.proxmox.com/debian/pve	bullseye	pve-enterprise		Proxmox	
File: /etc/apt/sources.list.d/pve-no-subscription.list (1 repository)							
<input checked="" type="checkbox"/>	deb	http://download.proxmox.com/debian	bullseye	pve-no-subscription		Proxmox	

# Proxmox versions ?

- En pratique qu'est-ce qui nous intéresse ?
  - Ceph : 16.2 Pacific quand on aura envie d'y passer
    - réduction espace disque requis
    - QoS entre les IO des clients possible
    - livemigration accepte les sources externes
    - un client Windows pour CephFS est maintenant disponible
  - OpenZFS 2.0
    - resilvering beaucoup plus rapide
    - meilleur compression

# Proxmox 7 oui mais Ceph pacific !!

- URL de mise à jour :

[https://pve.proxmox.com/wiki/Ceph\\_Octopus\\_to\\_Pacific#Preparation\\_on\\_each\\_Ceph\\_cluster\\_node](https://pve.proxmox.com/wiki/Ceph_Octopus_to_Pacific#Preparation_on_each_Ceph_cluster_node)

- On va faire comme précédemment :

- On modifie l'URL de récupération des paquets Ceph pour proxmox

« `sed -i 's/octopus/pacific/' /etc/apt/sources.list.d/ceph.list` »

- on active le flag « noout » de Ceph

- « apt update »

- « apt full-upgrade »

The screenshot shows the Proxmox VE web interface. On the left is a navigation menu with categories like System, Network, Certificates, DNS, Hosts, Options, Time, Syslog, Updates, Repositories, Firewall, Disks, LVM, LVM-Thin, Directory, ZFS, Ceph, Configuration, Monitor, and OSD. The 'Repositories' section is selected. The main content area shows a 'Warning' icon and message: 'Warning: You get updates for Proxmox VE. The no-subscription repository is not recommended for production use!'. Below this is the 'APT Repositories' section with 'Reload', 'Add', and 'Enable' buttons. A table lists the repositories:

# Proxmox 7 pacific après reboot

The screenshot displays the Proxmox VE interface for a datacenter named 'pve-test'. The left sidebar shows a tree view of nodes and storage pools. The main panel shows the 'default' storage pool configuration, listing OSDs (osd.0 to osd.5) with their status, version, weight, and usage. The OSDs are all in a 'up' state, indicating a successful reboot.

Buttons at the top: Reload, Create: OSD, Manage Global Flags, No OSD selected, Start, Stop, Restart, Out, In, More.

**Meta Data Servers**

# Proxmox important à retenir

- Mise en cluster triviale
- Mise en place du cluster Ceph complètement assistée
- Apporte le déplacement à chaud des MV
- Apporte la « HA » c'est-à-dire la Haute Disponibilité
- Firewalling des MV et des Hyperviseurs disponible
- **Les chemins d'upgrade sont généralement bien faits et fonctionnels**
- Les backups se font
  - soit sur le stockage compatible du cluster
  - soit vers un Proxmox Backup Server
- Proxmox Backup Serveur peut servir à faire la migration entre cluster proxmox

# Proxmox Backup Server

# PBS

- Open-Source
- Sauvegardes incrémentales pour le client
- À la réception des données elles sont dédoublées
- Les données sont compressées avec Zstandard (ZSTD)
- PBS est vu comme un « storage » classique par les serveurs proxmox.
- On peut partager le même stockage PBS entre plusieurs clusters

# PBS

- Il existe un mécanisme de synchronisation des données entre plusieurs PBS afin d'avoir une redondance des sauvegardes
- Les données peuvent être chiffrées (AES-256)
- SHA-256 est utilisé pour les sommes de contrôles qui sert également à la détection de blocks identiques

# PBS

- On restaure à partir de l'interface de proxmox
- On choisi la granularité de la restauration :
  - Fichier
  - répertoire
  - L'intégralité de la MV

# PBS

- L'étape de restauration permet de choisir
  - Si on restaure tout avant de démarrer
  - Si on restaure le minimum possible et qu'on démarre la machine. Le reste sera restauré pendant l'exécution de la machine virtuelle => intéressant pour un PCA
  - Veut-on le même id de MV ?
  - Veut-on la même adresse MAC

# PBS

- On dispose de mécanisme de vérification périodique des sauvegardes => pas mal pour un PRA
- On dispose d'un mécanisme de nettoyage des sauvegardes sortant de la politique de rétention.

# PBS

- Depuis les versions 2 de PBS => sauvegarde sur bandes :
  - Tape-Open 5 (LTO-5) avec chiffrement matériel
  - Politiques de rétention spécifiques aux bandes
    - Toujours recyclées
    - Jamais recyclées
    - Recyclées selon une politique calendaire etc...
    - LTO Barcode générateur web app

# Migration entre cluster

Si on partage les datastores PBS entre cluster PVE alors on peut migrer les MV entre cluster au travers des restaurations en Storage View !!!

C'est à vous 😊
