

# Learning with non-tabular data

*mardi 9 juillet 2024 09:30 (3 heures)*

Goal: Introduce the different types of data, with a focus on time-series, and the different methodologies to apply on each type.

- Overview of the different types of data: tabular data, time series, images, graph, signals.
- Overview of the specific problems and jargon with time series and signals.
- How to get back to a “classical” ML framework?
- Practical illustrations with time series.
